Working with Django Framework

1) Install Python version 3.7.0
2) Open Pycharm and set the appropriate path (folder) to store your project.
3) Set this interpreter version 3.7 into pycharm.
4) Go to the terminal in the pycharm on left side of the window.

5) Type *django-admin startproject HousePricePrediction* on this terminal. (here my project name is *HousePricePrediction*)
6) Go to the specified folder where you want to save the project.
7) In next line type, *python manage.py runserver*
8) You will get a link of the server. Here http://127.0.0.1:8000/ is my link.

9) Click on this link. You will be redirected to browser where the web interface will be seen.
